Technical Assessment Body issuing the European Technical Assessment:

Trade name of the construction product

Product family to which the construction product belongs

Manufacturer

Manufacturing plant

This European Technical Assessment contains

This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of

Deutsches Institut für Bautechnik

ThermoScrew TS U8 Gecko

Screwed-in plastic anchor for fixing of external thermal insulation composite systems with rendering in concrete and masonry

Kunststofferzeugnisse GmbH Wilthen Dresdener Straße 19 02681 Wilthen DEUTSCHLAND

Herstellwerk 1, 2 manufacturing plant 1, 2

15 pages including 3 annexes which form an integral part of this assessment

Guideline for European technical approval of "Plastic anchors for fixing of external thermal insulation composite systems with rendering", ETAG 014, edition February 2011,

used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011.

## European Technical Assessment ETA-16/0100 English translation prepared by DIBt

Page 2 of 15 | 5 April 2016

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

## European Technical Assessment ETA-16/0100

Page 3 of 15 | 5 April 2016

English translation prepared by DIBt

## **Specific Part**

## 1 Technical description of the product

The Screwed-in anchor ThermoScrew TS U8 Gecko consists of an anchor sleeve made of polypropylene and a screw plate in different colours made of polyamide and an accompanying specific screw of galvanised steel.

The product description is given in Annex A.

## 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verification and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 25 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

## 3 Performance of the product and references to the methods used for its assessment

## 3.1 Mechanical resistance and stability (BWR 1)

The essential characteristics regarding mechanical resistance and stability are included under the Basic Works Requirement Safety in use.

## 3.2 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

### 3.3 Safety and accessibility in use (BWR 4)

Essential characteristic	Performance
Characteristic resistance	See Annex C 1
Anchor distances and dimensions of members	See Annex B 2
Displacements	See Annex C 2

## 3.4 Sustainable use of natural resources (BWR 7)

For the sustainable use of natural resources no performance was determined for this product.

## 4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 014, February 2011 used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011 the applicable European legal act is: 97/463/EC.

The system to be applied is: 2+

## **European Technical Assessment ETA-16/0100**

Page 4 of 15 | 5 April 2016

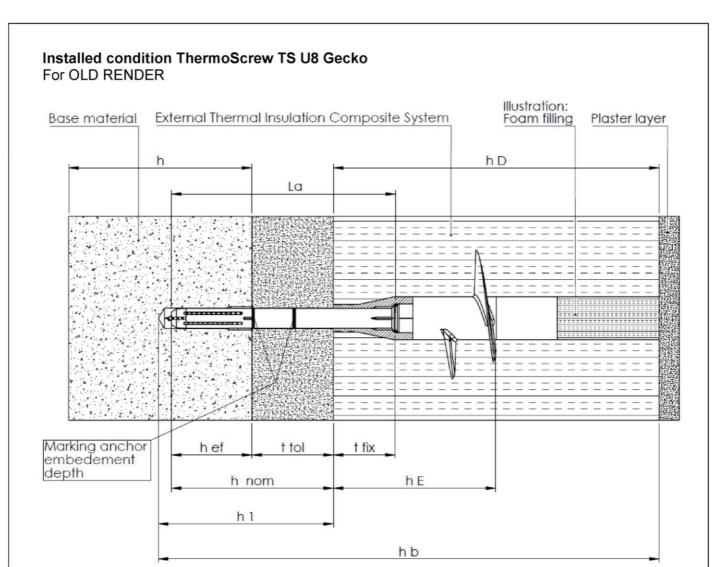

English translation prepared by DIBt

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Uwe Benderbeglaubigt:Head of DepartmentZiegler

## Legend

 $h_{nom}$  = overall plastic anchor embedment depth in the base material with non-load-bearing layer ( $t_{tol}$ )

 $h_{ef}$  = effective anchorage depth

h<sub>1</sub> = depth of drilled hole to deepest point

h = thickness of member (wall)

h<sub>D</sub> = thickness of insulation material

 $t_{tol}$  = thickness of equalizing layer and/or non-load-bearing layer

 $t_{fix}$  = position of screw plate  $h_E$  = embedment depth

h<sub>b</sub> = total borehole depth

 $L_{d. anchor}$  = total length of anchor

ThermoScrew TS U8 Gecko	
Product description Installed condition for OLD RENDER	Annex A 1

## Specifications of intended use

## Anchorages subject to:

• The anchor may only be used for transmission of wind suction loads and shall not be used for the transmission of dead loads of the thermal insulation composite system.

#### Base materials:

- · Normal weight concrete (use category A) according to Annex C 1
- Solid masonry (use category B), according to Annex C 1 and C 3
- Hollow or perforated masonry (use category C), according to Annex C 1 and C 3
- Lightweight aggregate concrete (use category D), according to Annex C 1
- · Autoclaved aerated concrete (use category E), according to Annex C 1
- For other base materials of the use categories A, B, C, D or E the characteristic resistance of the anchor may be determined by job site tests according to ETAG 014 Edition February 2011, Annex D.

## Temperature Range:

• 0°C to +40°C (max. short term temperature +40°C and max. long term temperature +24°C)

## Design:

- The anchorages are designed in accordance with the ETAG 014 Edition February 2011 under the responsibility of an engineer experienced in anchorages and masonry work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The
  position of the anchor is indicated on the design drawings.
- Fasteners are only to be used for multiple fixings of thermal insulation composite systems.

### Installation:

- Hole drilling by the drill modes according to Annex C 1.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Installation temperature from 0°C to +40°C
- Exposure to UV due to solar radiation of the anchor not protected by rendering ≤ 6 weeks

ThermoScrew TS U8 Gecko

Intended use Installation parameters Distance and dimensions of the base material	Annex B 2

## Installation instructions for OLD RENDER

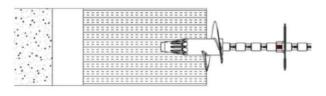

## 1. Attach stop washer to setting tool

For example with an insulation thickness of 16 cm = 160 mm attach the stop washer at "160".

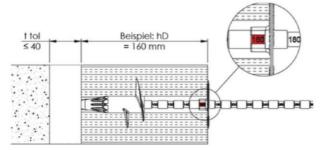

Note: Stop washer labeling "OLD RENDER" must face

towards the applicator.

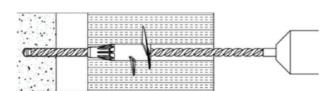

## 2. Install screw plate

Optionally, pre-drill the insulation panel. Position the ThermoScrew TS U8 Gecko spiral unit on the setting tool and press firmly against the insulation panel.

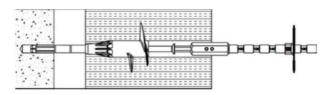

Slowly screw in the spiral unit at a low rotation setting until the stop washer is flush with the insulation board surface.

## 3. Drill hole with the drill bit

Total borehole depth  $h_b$ = thickness of insulation material  $h_D$  + 80 mm

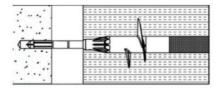

Note: Ventilate the drill hole several times. When drilling in perforated brick and aerated concrete only use rotary drilling without hammer.

### 4. Position screw anchor and install

Using the setting tool, position the anchor through the spiral unit beneath the surface until the anchor sleeve stands out in the recess of the spiral unit. Screw the fixing.

Note: If the screw is stripped, a new screw plate must be installed.

## 5. Closing the borehole in the insulation

Close the borehole with an insulation plug. Alternatively, fill the borehole with a suitable foam, approved by the system designer.

Annex B 3

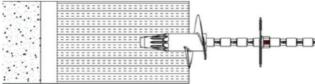

## Installation instructions for NEW BUILDING

## 1. Attach stop washer to setting tool

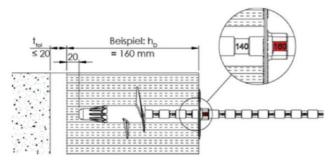

For example with an insulation thickness of 16 cm = 160 mm attach the stop washer at "160".

Note: Position stop washer labeling "NEW BUILDING" must face towards the applicator.

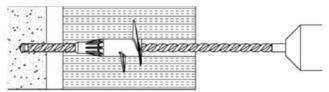

## 2. Install screw plate

Optionally, pre-drill the insulation panel. Position the ThemoScrew TS U8 Gecko spiral unit on the setting tool and press firmly against the insulation panel.

Slowly screw in the spiral unit at a low rotation setting until the stop washer is flush with the insulation board surface.

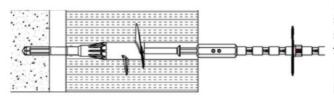

Total borehole depth  $h_b$  = thickness of insulation material  $h_D$  + 60 mm

Note: Ventilate the drill hole several times. When drilling in perforated brick and aerated concrete only use rotary drilling without hammer.

## 4. Position screw anchor and install

Using the setting tool, position the anchor through the spiral unit beneath the surface until the anchor sleeve stands out in the recess of the spiral unit. Screw the fixing.

Note: If the screw is stripped, a new screw plate must be installed.

## 5. Closing the borehole in the insulation

Close the borehole with an insulation plug. Alternatively, fill the borehole with a suitable foam, approved by the system designer.
